

Organisational Supports for Implementation within BCUHB Clinical Therapies CPG

FUNDING

Betsi Cadwaladr University Health Board

RESEARCH QUESTION

What are the organisational supports for implementation within the CPG? What practice can be shared?

DESIGN

A regional survey of professional staff across the Clinical Programme Group incorporating the Absorptive and Receptive Capacity Scale.

ABOUT THE STUDY

Models for service improvement in health care tend to reflect traditional approaches to evidence-based practice where evidence is published, and implementation is monitored. The limitations of this approach are now widely acknowledged, where implementation is influenced by the people involved, the organisational context in which evidence is implemented, and the process by which implementation itself is organised. It is essential therefore that evidence implementation is undertaken within an organisational learning context where workforce and service development are fully integrated.

THE TEAM

Project lead: Dr Chris Burton: c.burton@bangor.ac.uk

Co-investigators

Professor Jo Rycroft-Malone: j.rycroft-malone@bangor.ac.uk

Julie Wilkins, Head of Physiotherapy, therapy and Clinical Support CPG, Betsi Cadwaladr University Health Board
